Selected projects

Creative Dock – App development for a major food market

Front-end 2025 – Present

Developing a web application for internal operations of a major food market, and a customer-facing mobile app. Focusing on high-performance and user-friendly interfaces, I build scalable solutions using React & React Native. Responsible for delivering intuitive user experiences while handling complex data and business logic for a large user base. Strong emphasis on UX, performance, and code reusability.

Apitree – Customer portal for E.ON (energy supplier)

Front-end 2023 – 2024

Responsibility: Build a robust front-end for customer portal for E.ON (German power supplier) in the team of 5 developers. Deliver solution that handles complex logic of an app for 1.5 million users.

Achievements: Developed a library of reusable components used across the app. Shipped bundle of complex mobile-first features (such as payments) with emphasis on UX and performance.

Tvar – Renowned literature magazine in Czech republic

Tech lead 2014 – 2017

Responsibility: To lead the magazine into a digital world in a stable and sustainable way. Pitching new online formats. Establishing online subscription.

Achievements: A robust website with new digital-friendly formats: Podcasts, online revue, culture service, networking. Digital archive with full-text. Online subscription almost doubled the income of the magazine.
